A Flying Car

London (CNN Business) A **prototype** flying car has completed a test flight between two cities in Slovakia, spending 35 minutes airborne.

**It's hard to keep up with technology
these days.**

The latest example of science fiction becoming science fact is a flying car.

For decades, we have watched movies about a future with flying cars.

However, this is not only found in movies; it is now being turned to reality!

Journalists saw a real one in flight.

A test flight between two cities in Slovakia was completed by a prototype flying AirCar.

The car flew between a **regional** airport and an airport in the capital city Bratislava.

The 90km journey took 35 minutes to complete. AirCar is from a company called Klein Vision.

A **founder** of the company said:

"AirCar is no longer just a proof of
concept."

" He added: "Flying at [2,500 metres] at a speed of [185kph], it has turned science fiction into a reality."

AirCar is a road-legal car that transforms into an aircraft in less than three minutes.

The **vehicle** was flown and landed on its recent test flight by AirCar CEO Professor Stefan Klein.

After landing at Bratislava Airport, the aircraft was **transformed** into a sports car with one push of a button.

**It was driven into downtown Bratislava
on the city's streets.**

**He described the flight as "normal"
and "very pleasant".**

**His company is working on a new,
more powerful model called AirCar
Prototype 2.**

This will have a much more powerful engine that is capable of a **crusing** speed of 300kph and a range of 1,000 kilometres.

The newer model will also be a four-seater as opposed to the two-seater that was recently tested.

The potential of flying vehicles is being explored by a growing number of companies despite hurdles including safety and reliability.

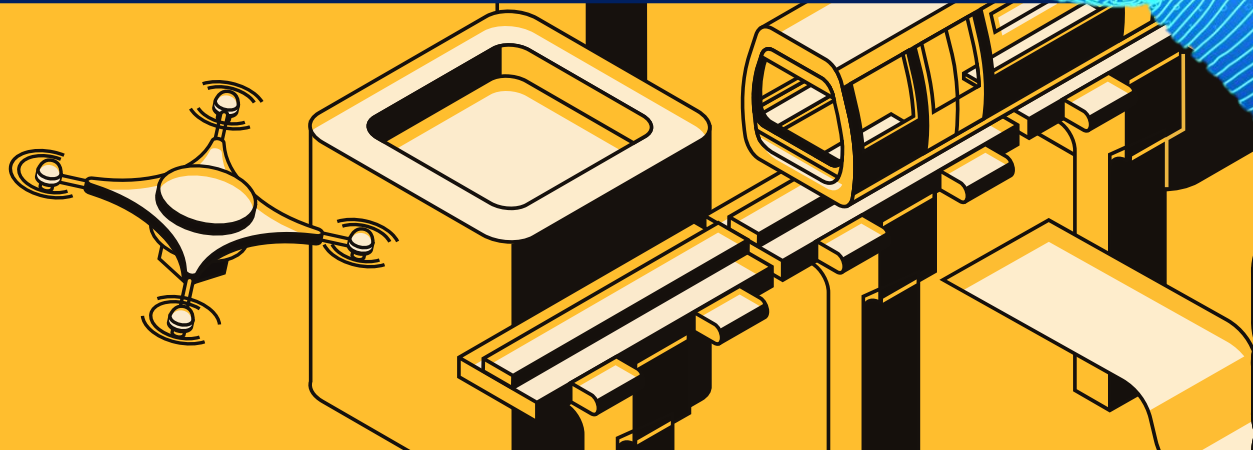

Flying vehicles would need to operate in crowded airspace, near small drones and traditional airplanes, and also need a regulatory **framework**, which could take years.
