Natural Disasters

จุดประสงค์การเรียนรู้

1. อ่านและระบุคำศัพท์จากเรื่อง Deforestation ได้

avalanche (n)

flood (v)

hurricane (n)

tsunami (n)

earthquake (n)

forest fire (n)

drought (n)

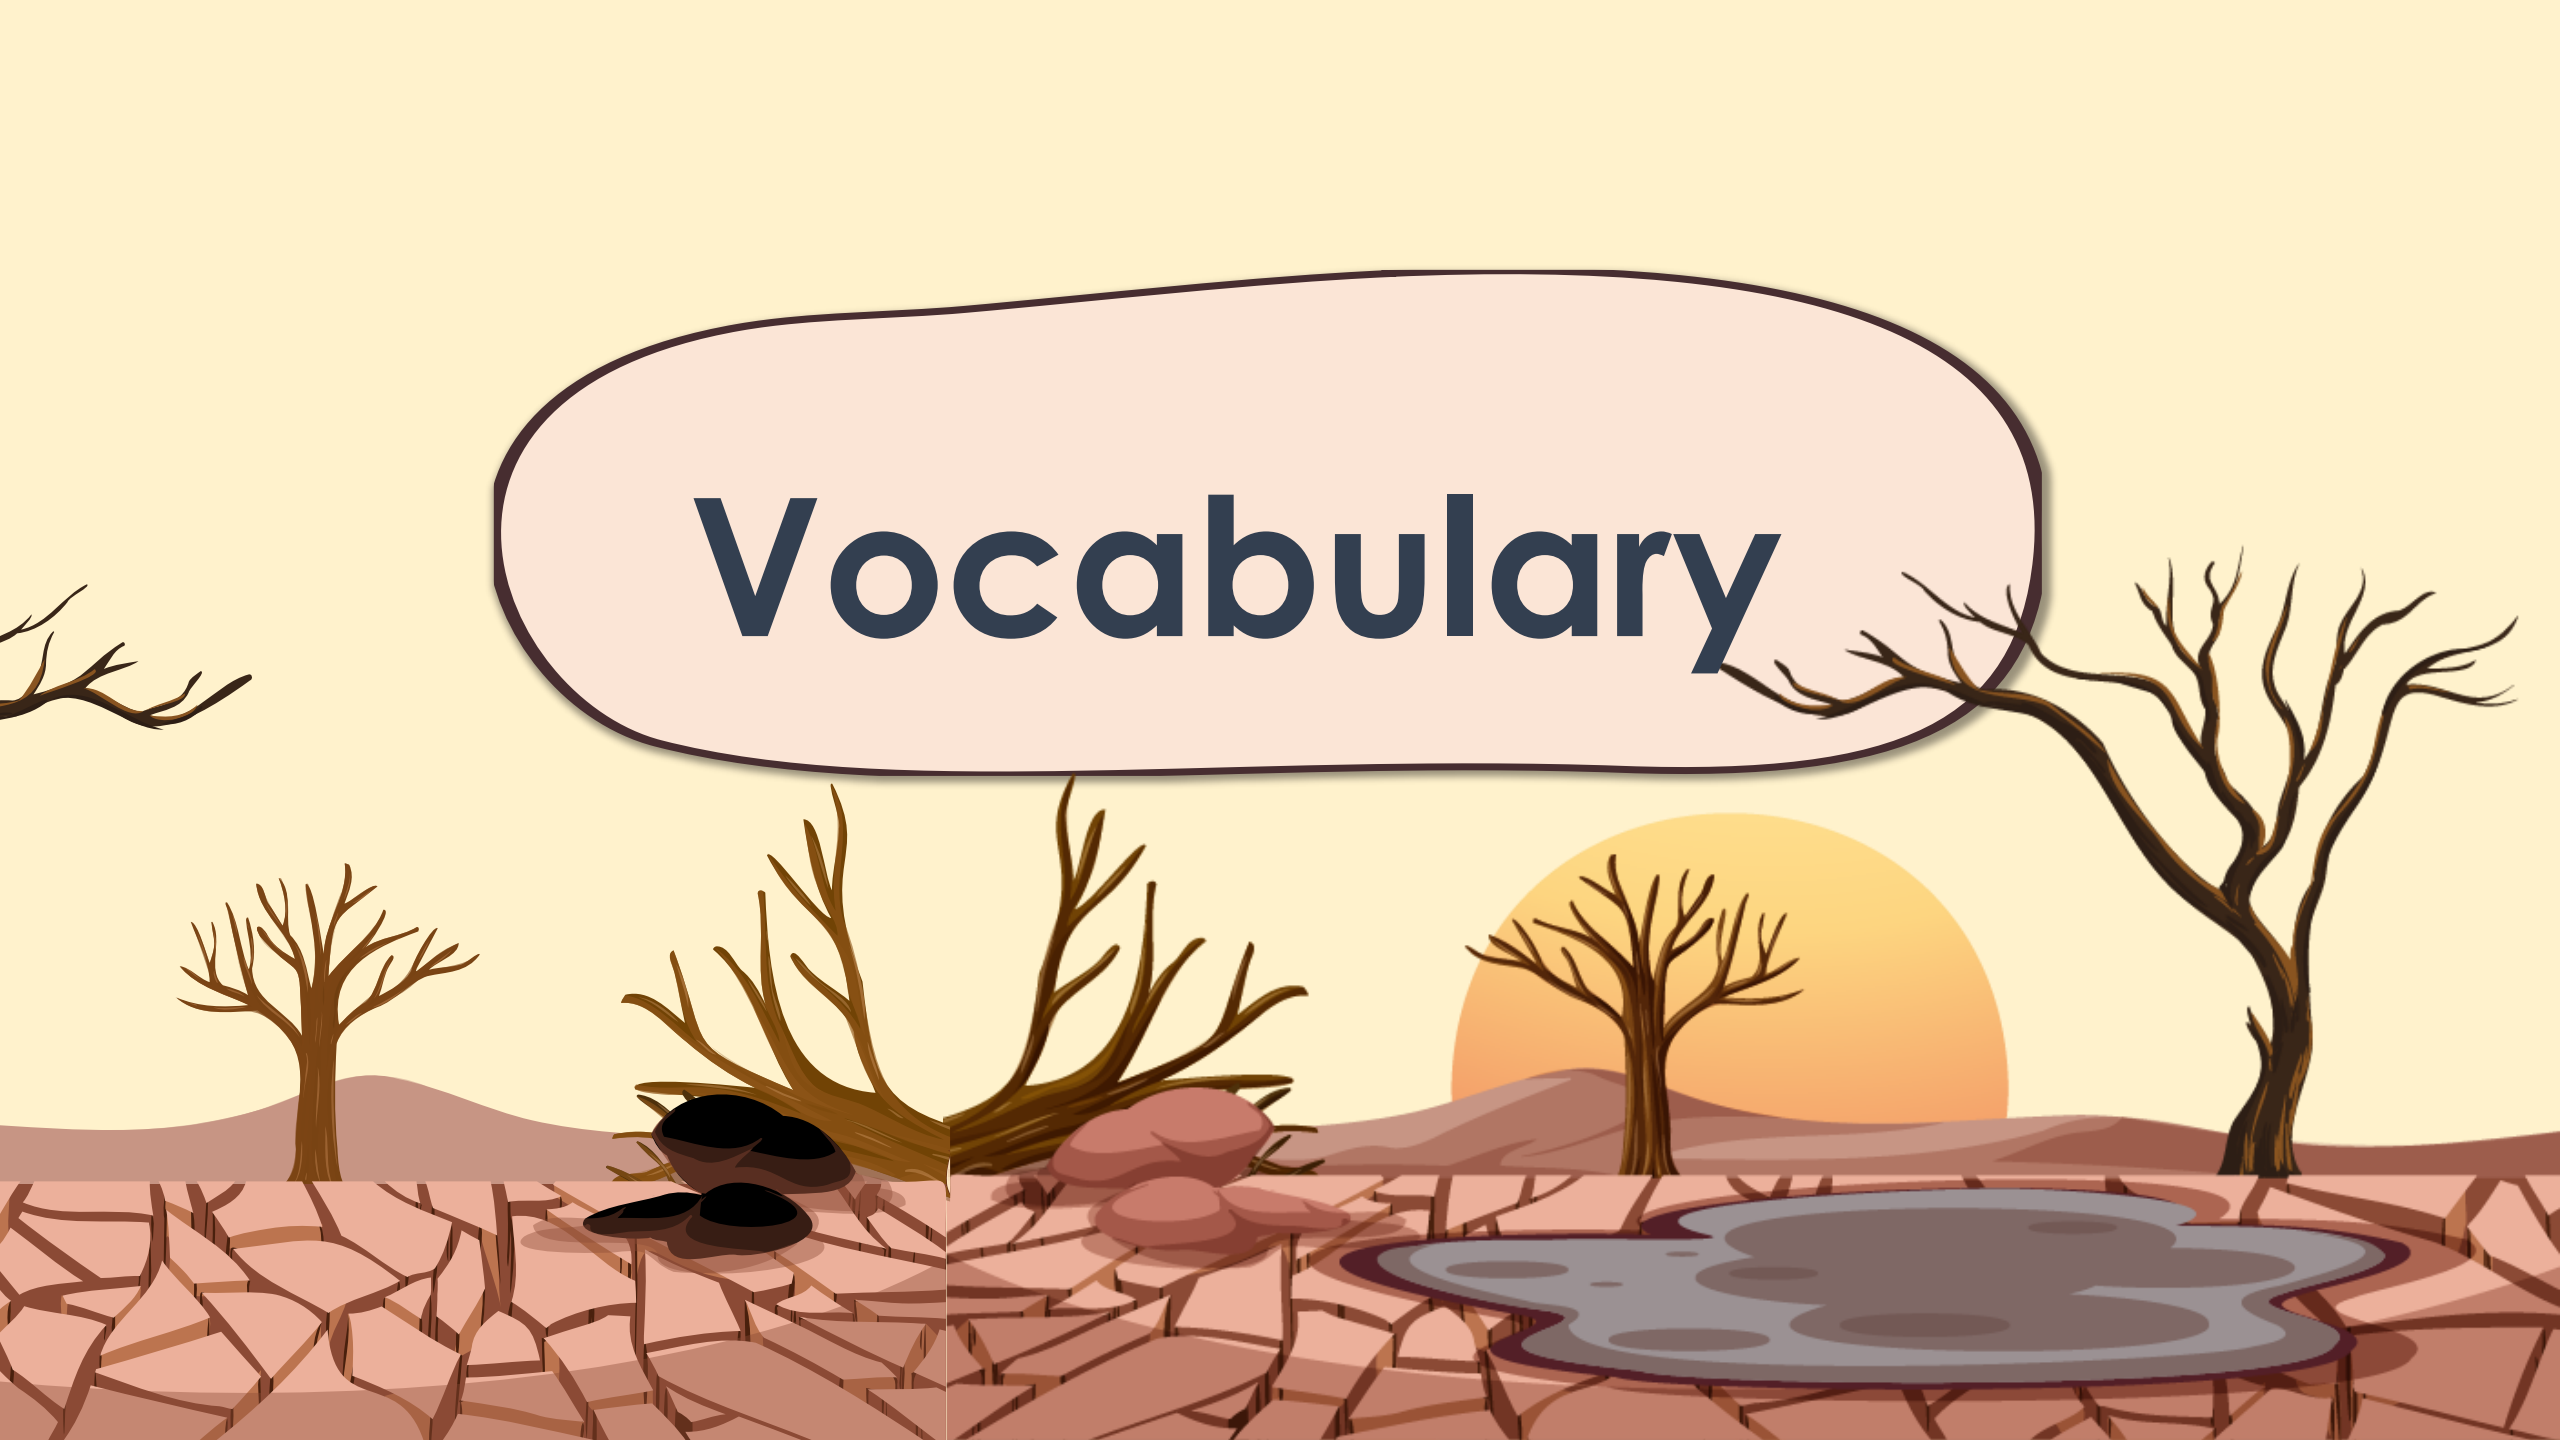

volcanic eruption (n)

landslide (n)

Vocabulary

natural disaster (n)

a natural event such as a flood, earthquake, or tsunami that kills or injures a lot of people.

deforestation (n)

the cutting down of trees in a large area, or the destruction of forests by people

agriculture (n)

the business, science, or activity of farming

rainforest (n)

a forest in a tropical area that receives a lot of rain.

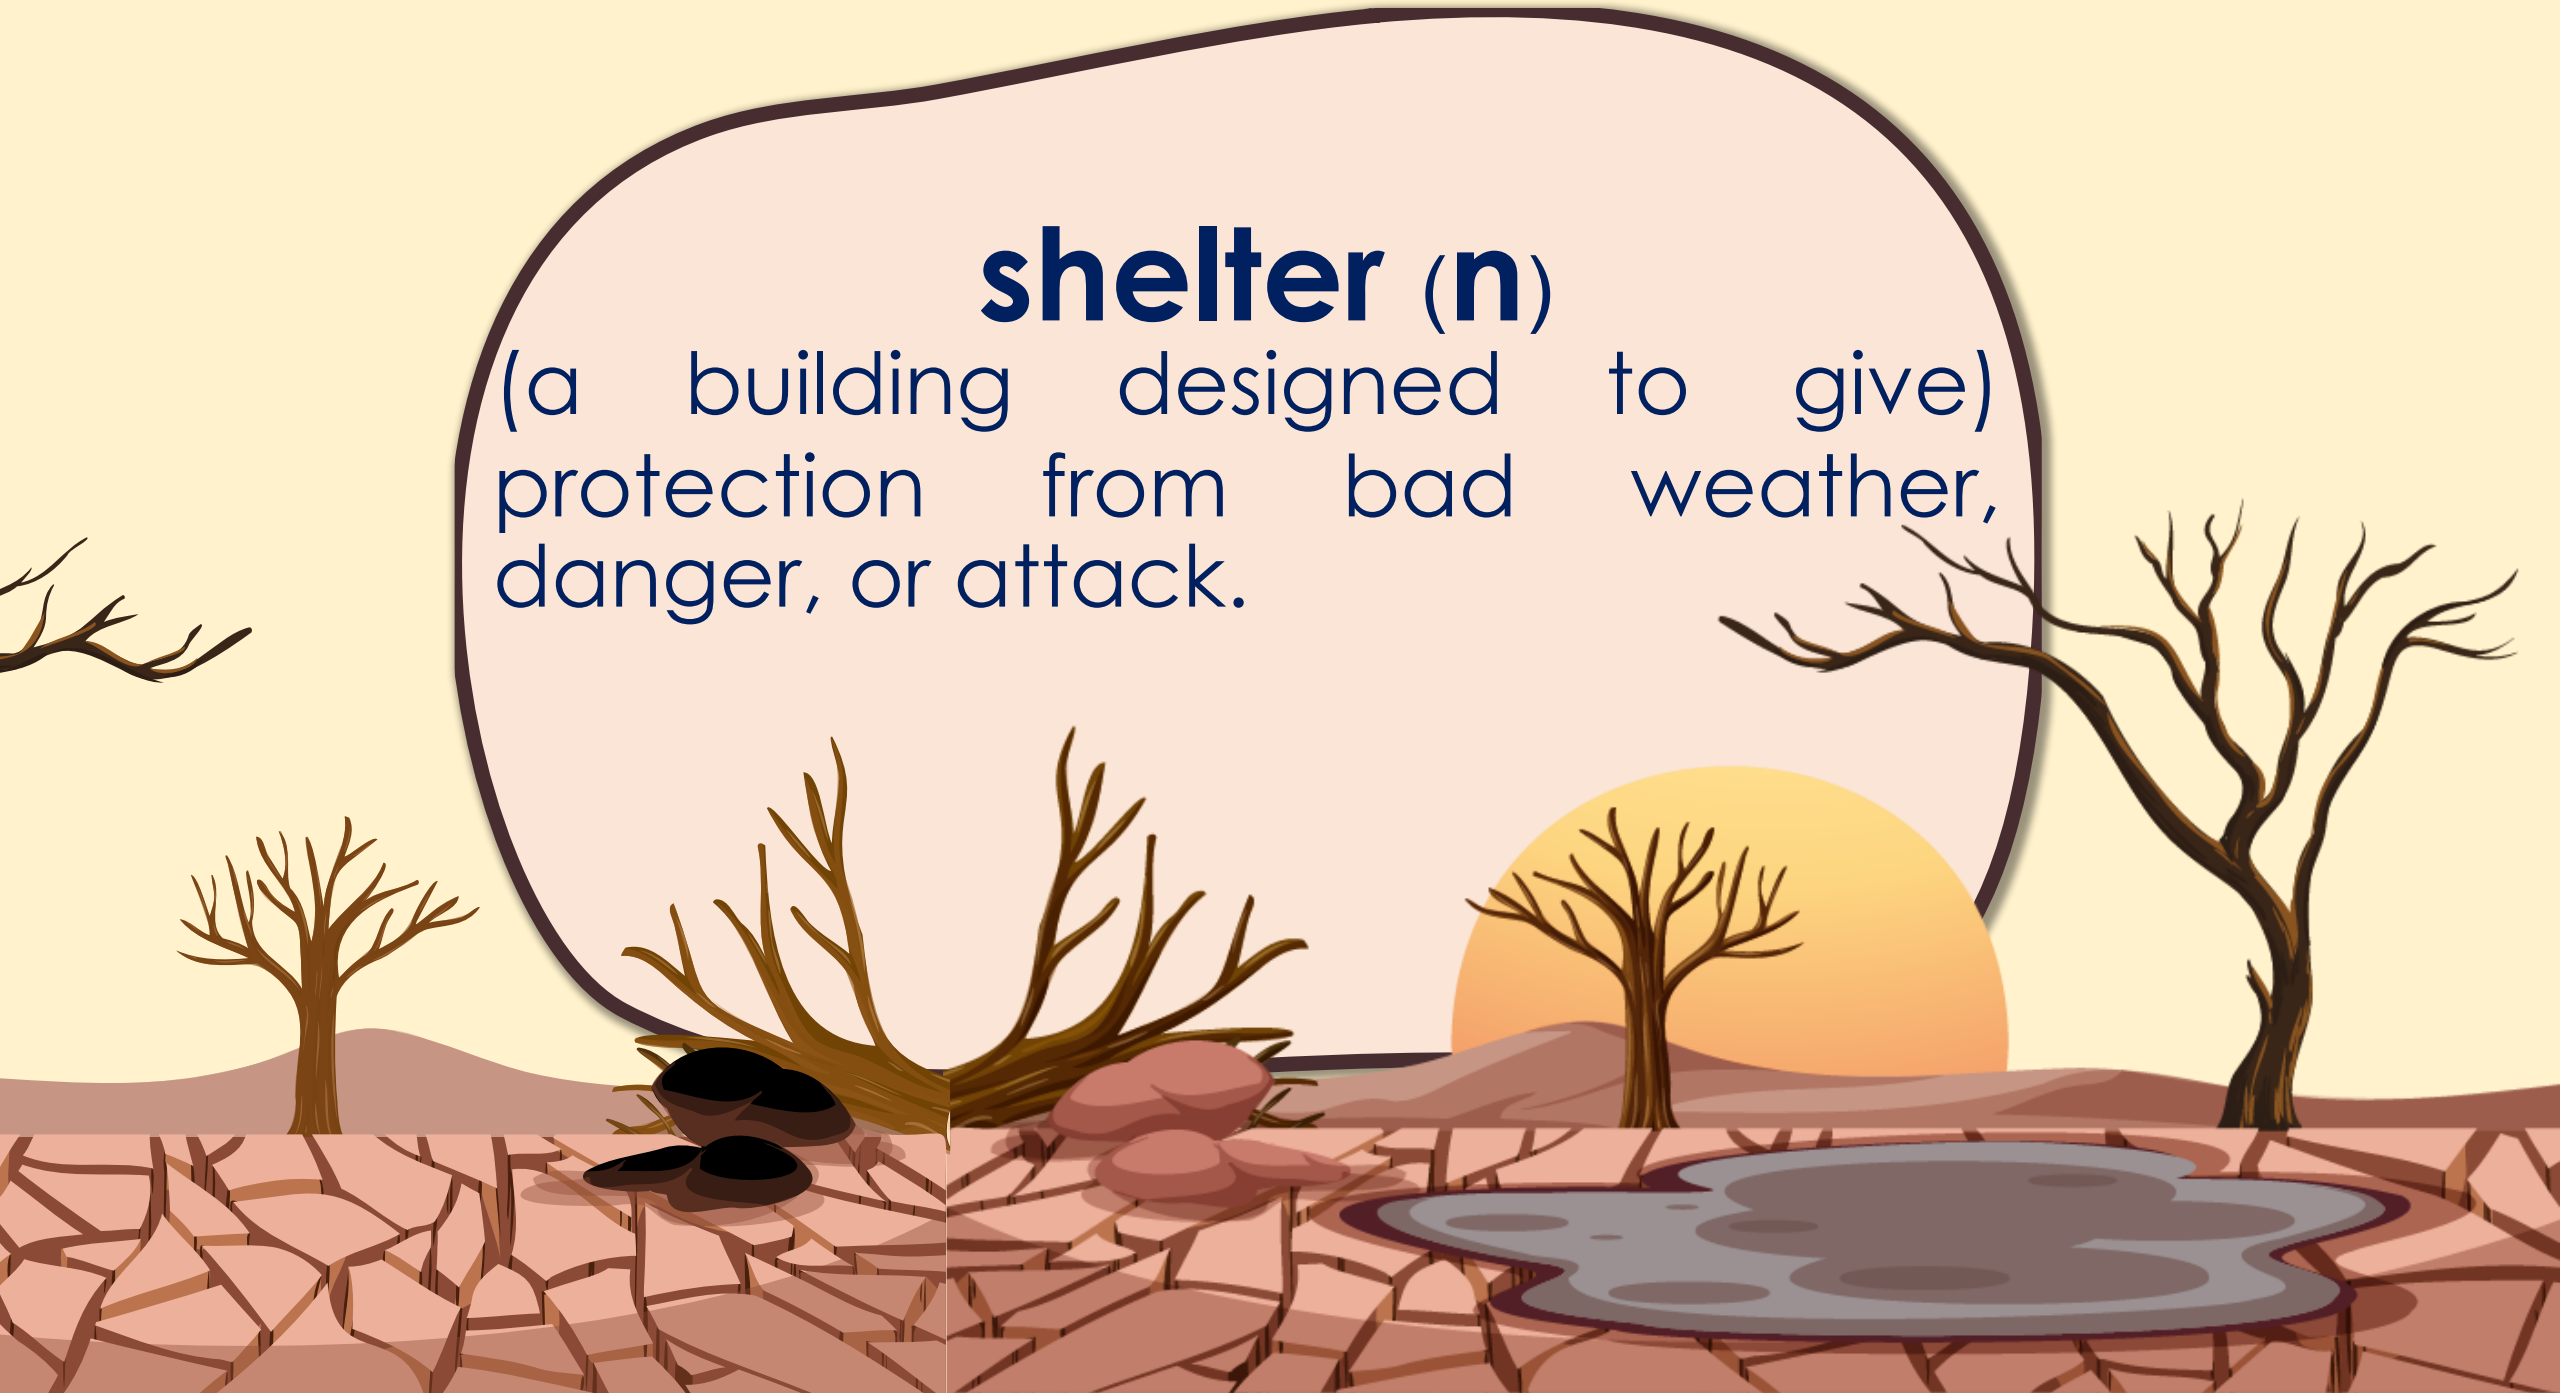

climate (n)

the general weather conditions usually found in a particular place

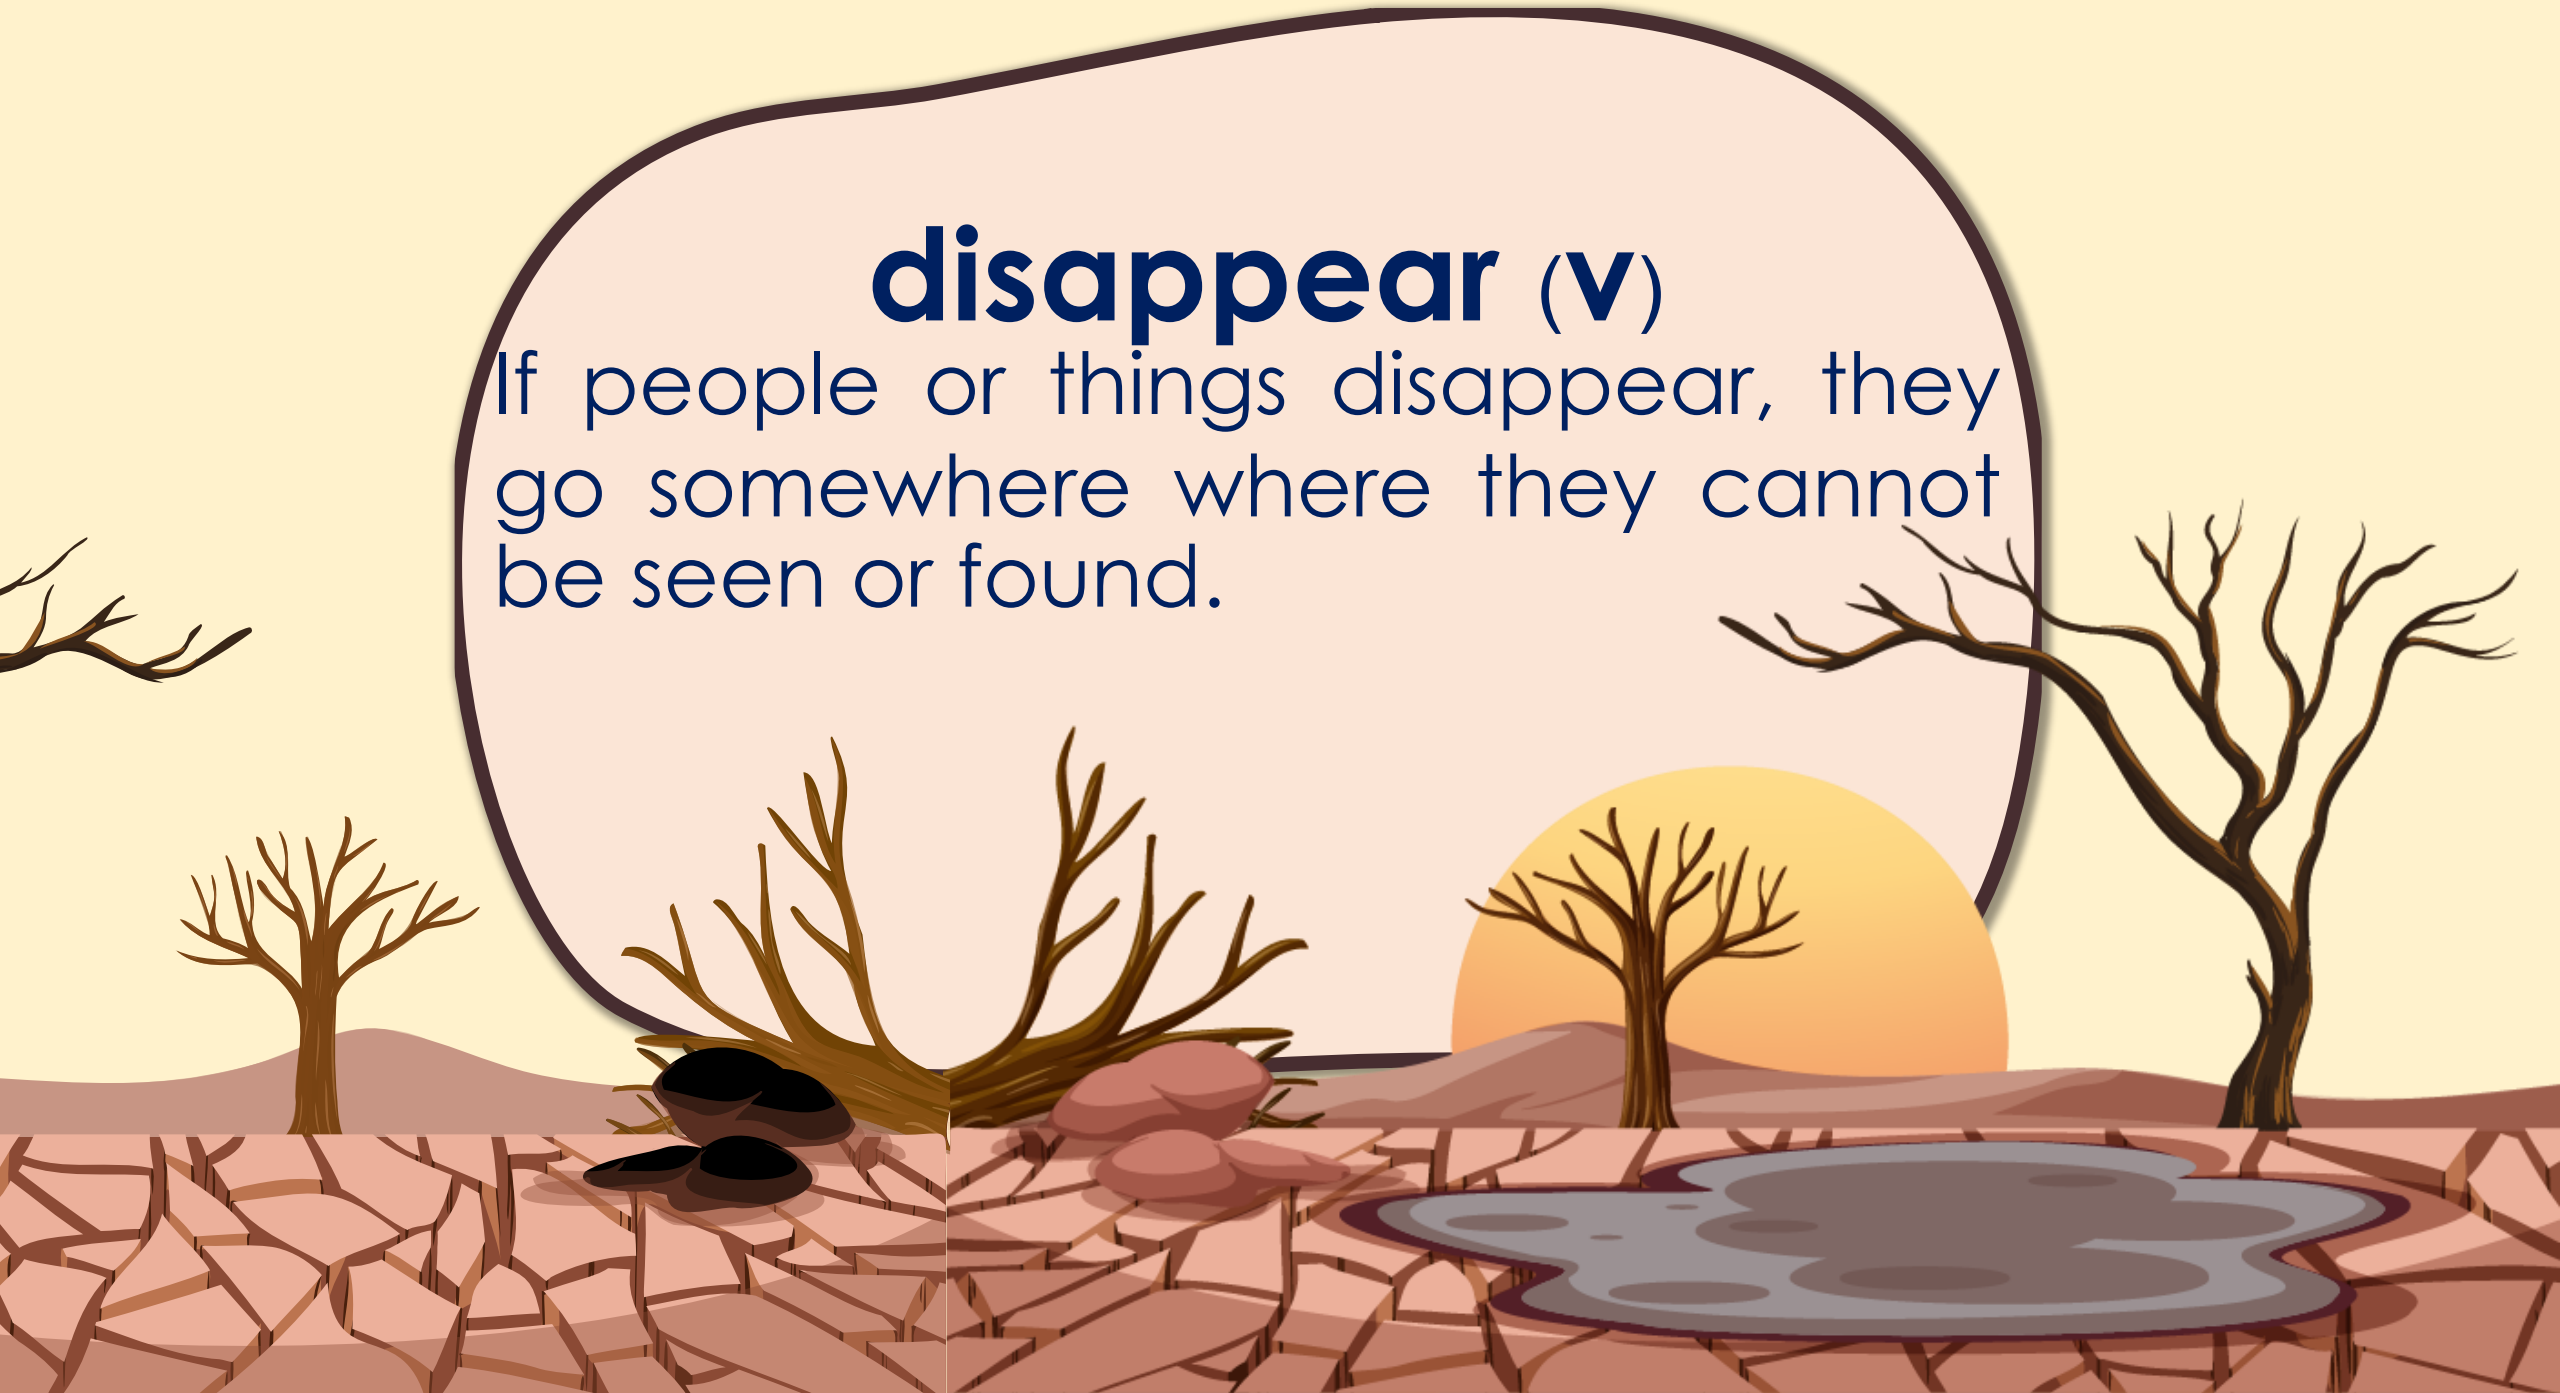

shelter (n)

(a building designed to give) protection from bad weather, danger, or attack.

disappear (v)

If people or things disappear, they go somewhere where they cannot be seen or found.

landscape (n)

a large area of land, especially in relation to its appearance.

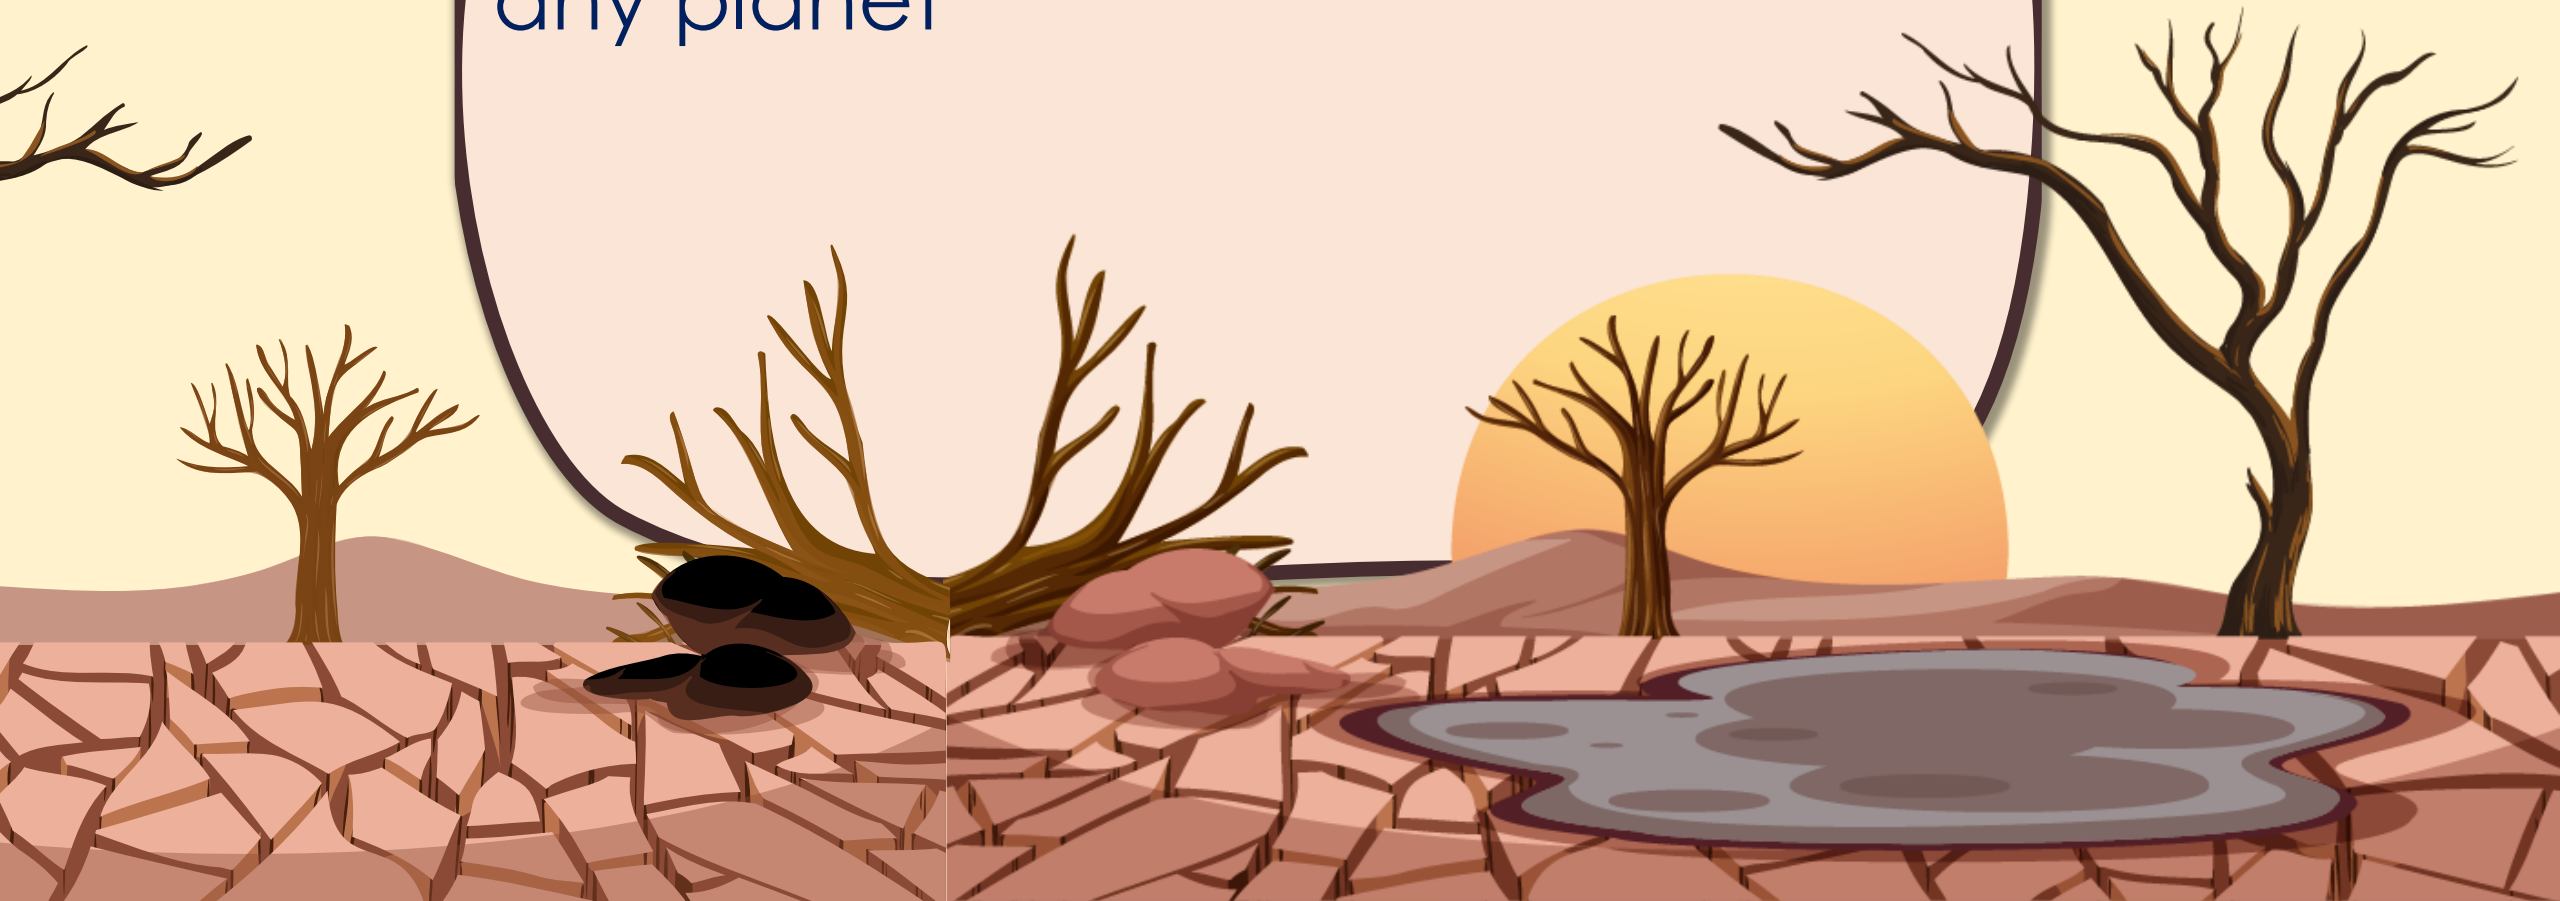

extinct (adj)

not now existing.

atmosphere (n)

a mixture of gases that surrounds any planet

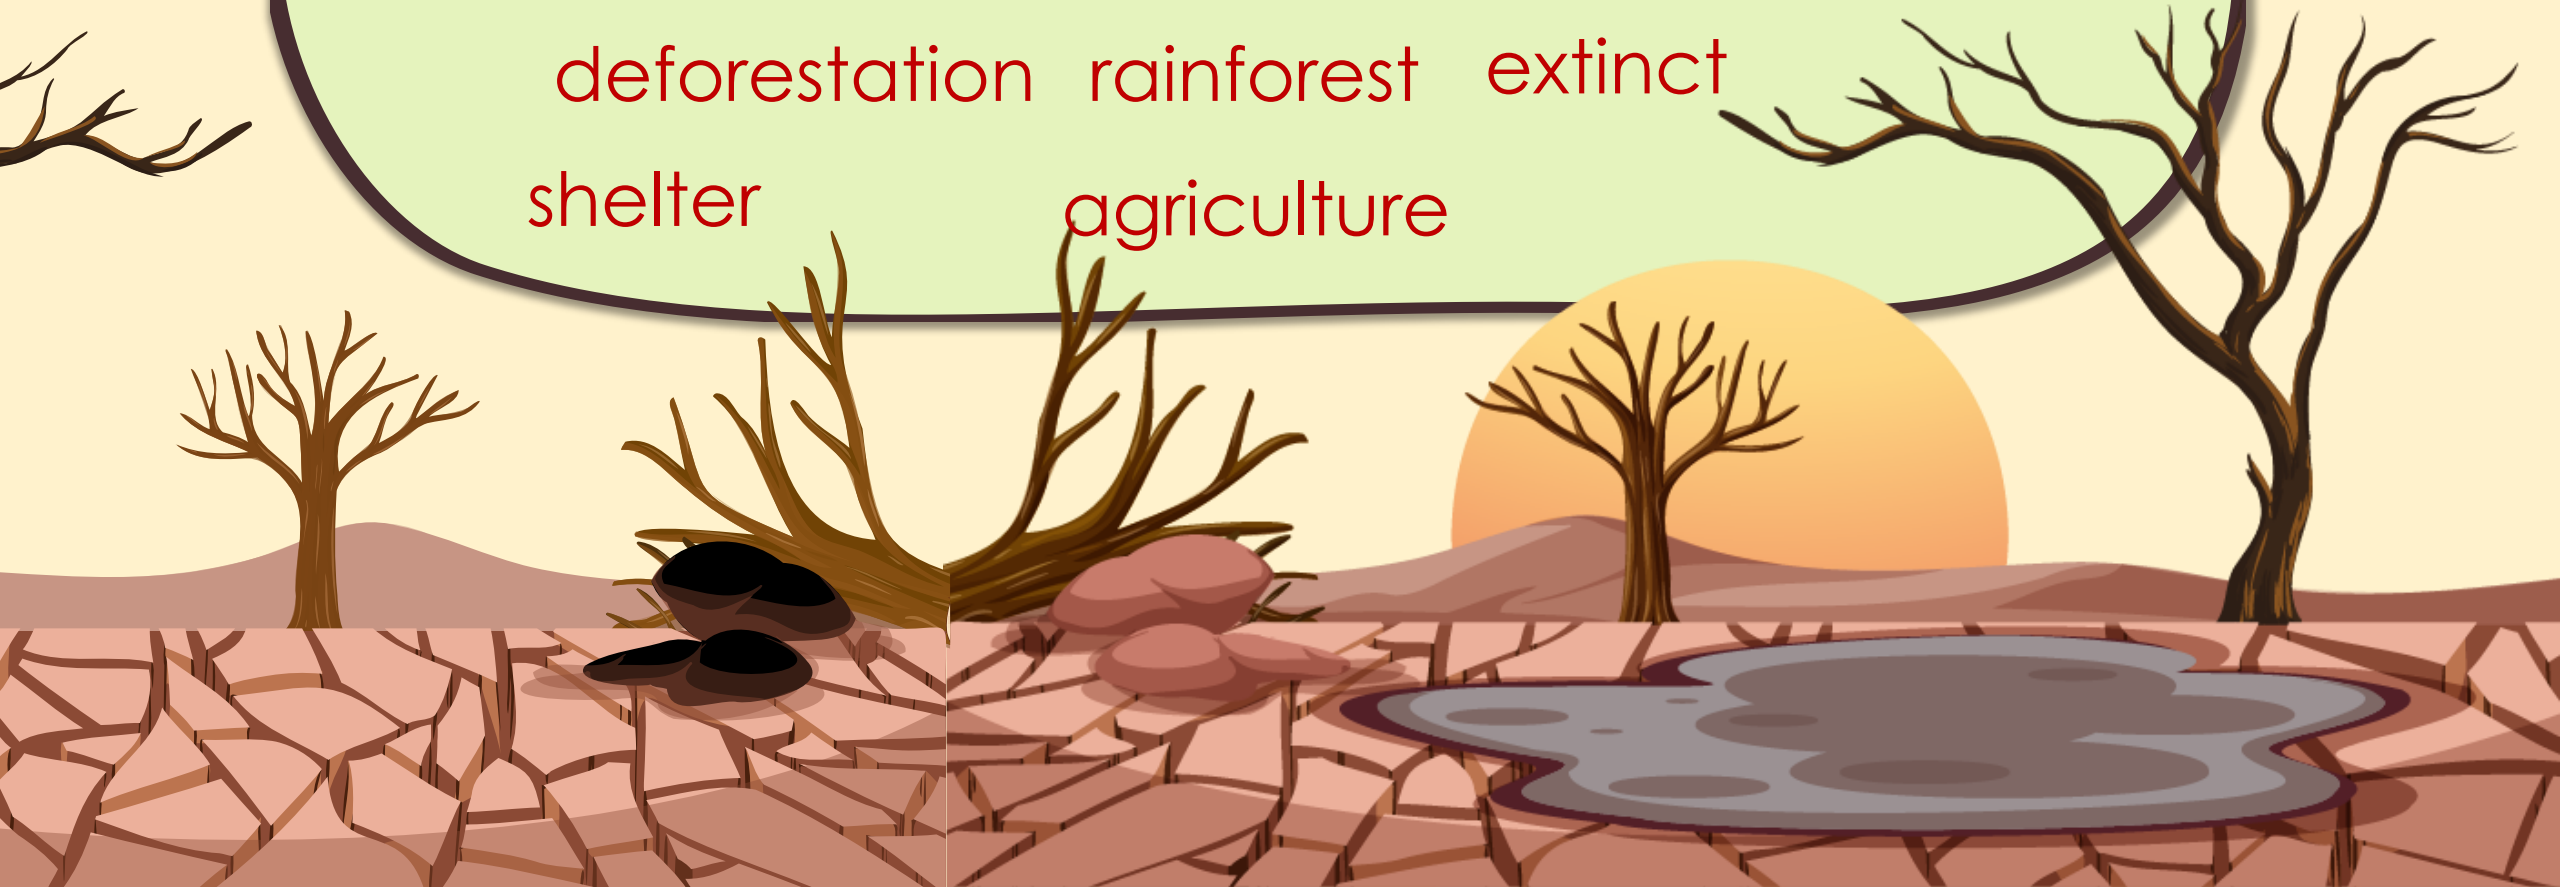

ใบงานที่ 1

Directions: put the words in each blank.

disappear climate atmosphere

deforestation rainforest extinct

shelter agriculture

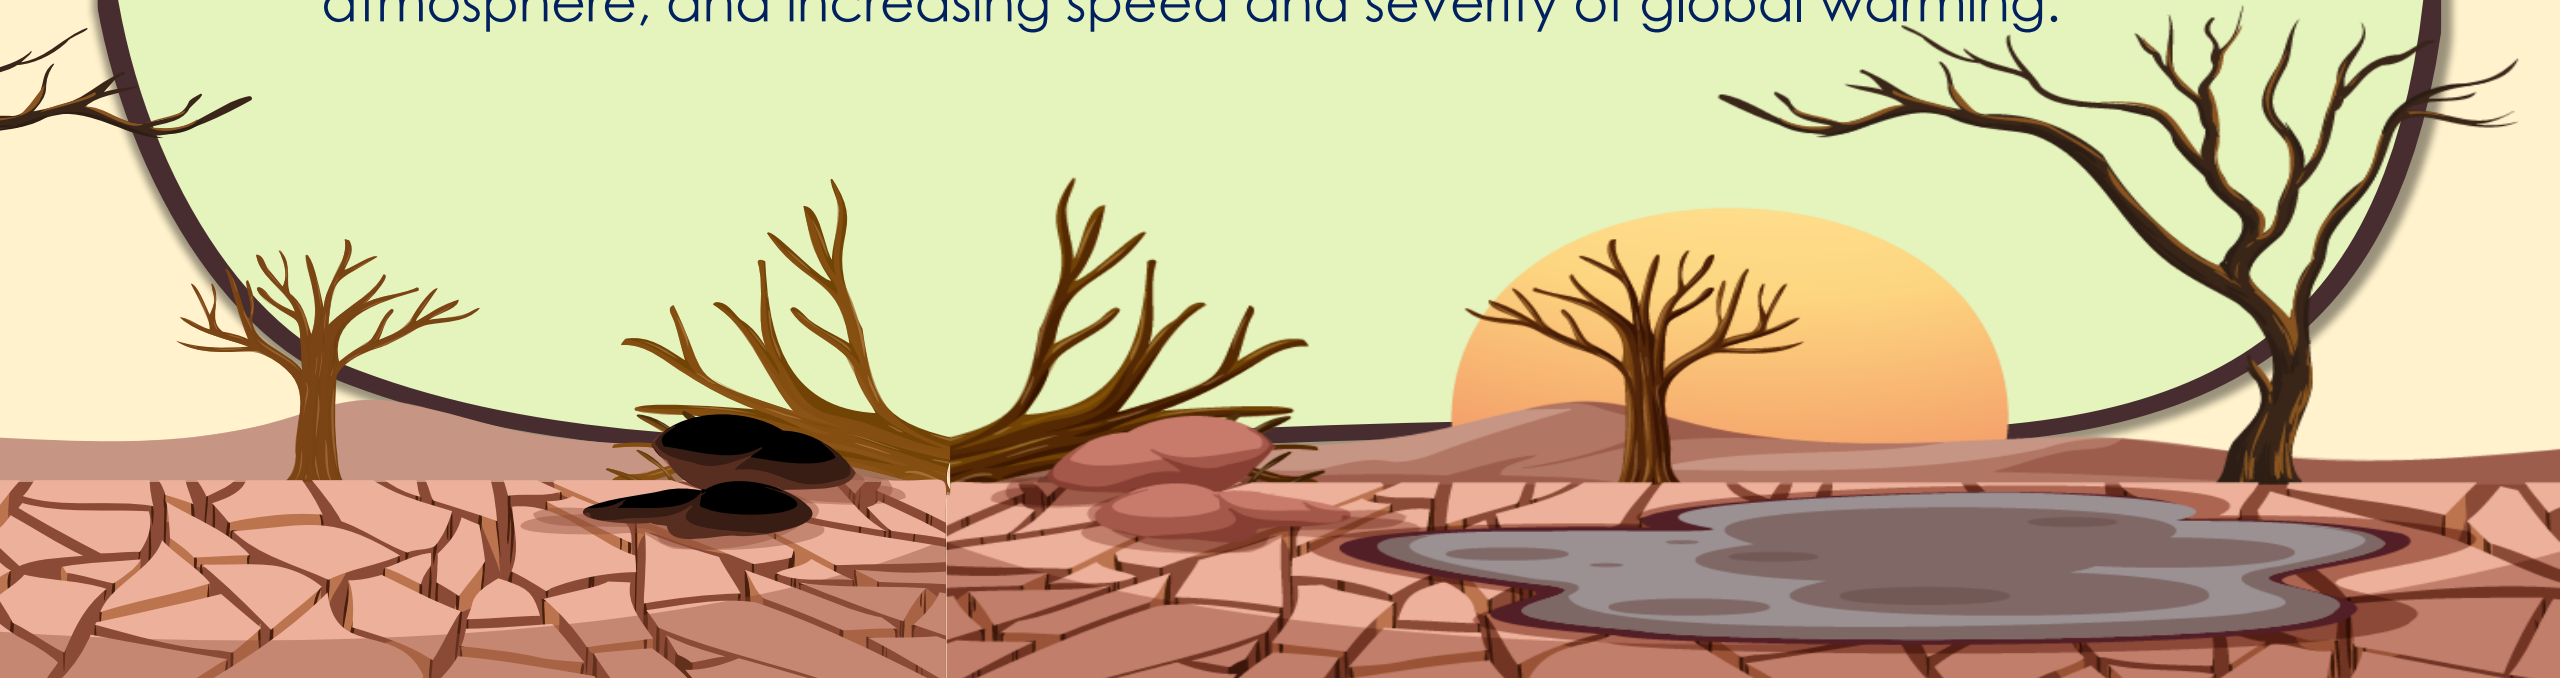

Forests cover about 30% of the planet. And the ecosystems they create play an essential role in supporting life on earth. But, deforestation is clearing earth's forest on a massive scale. And at the current rate of destruction, the world's rainforest can completely**disappear**..... within 100 years.

Why should we care about deforestation? Together, Forestry and Agriculture are responsible for 24% of greenhouse gas emissions, making deforestation a significant contributor to climate change.

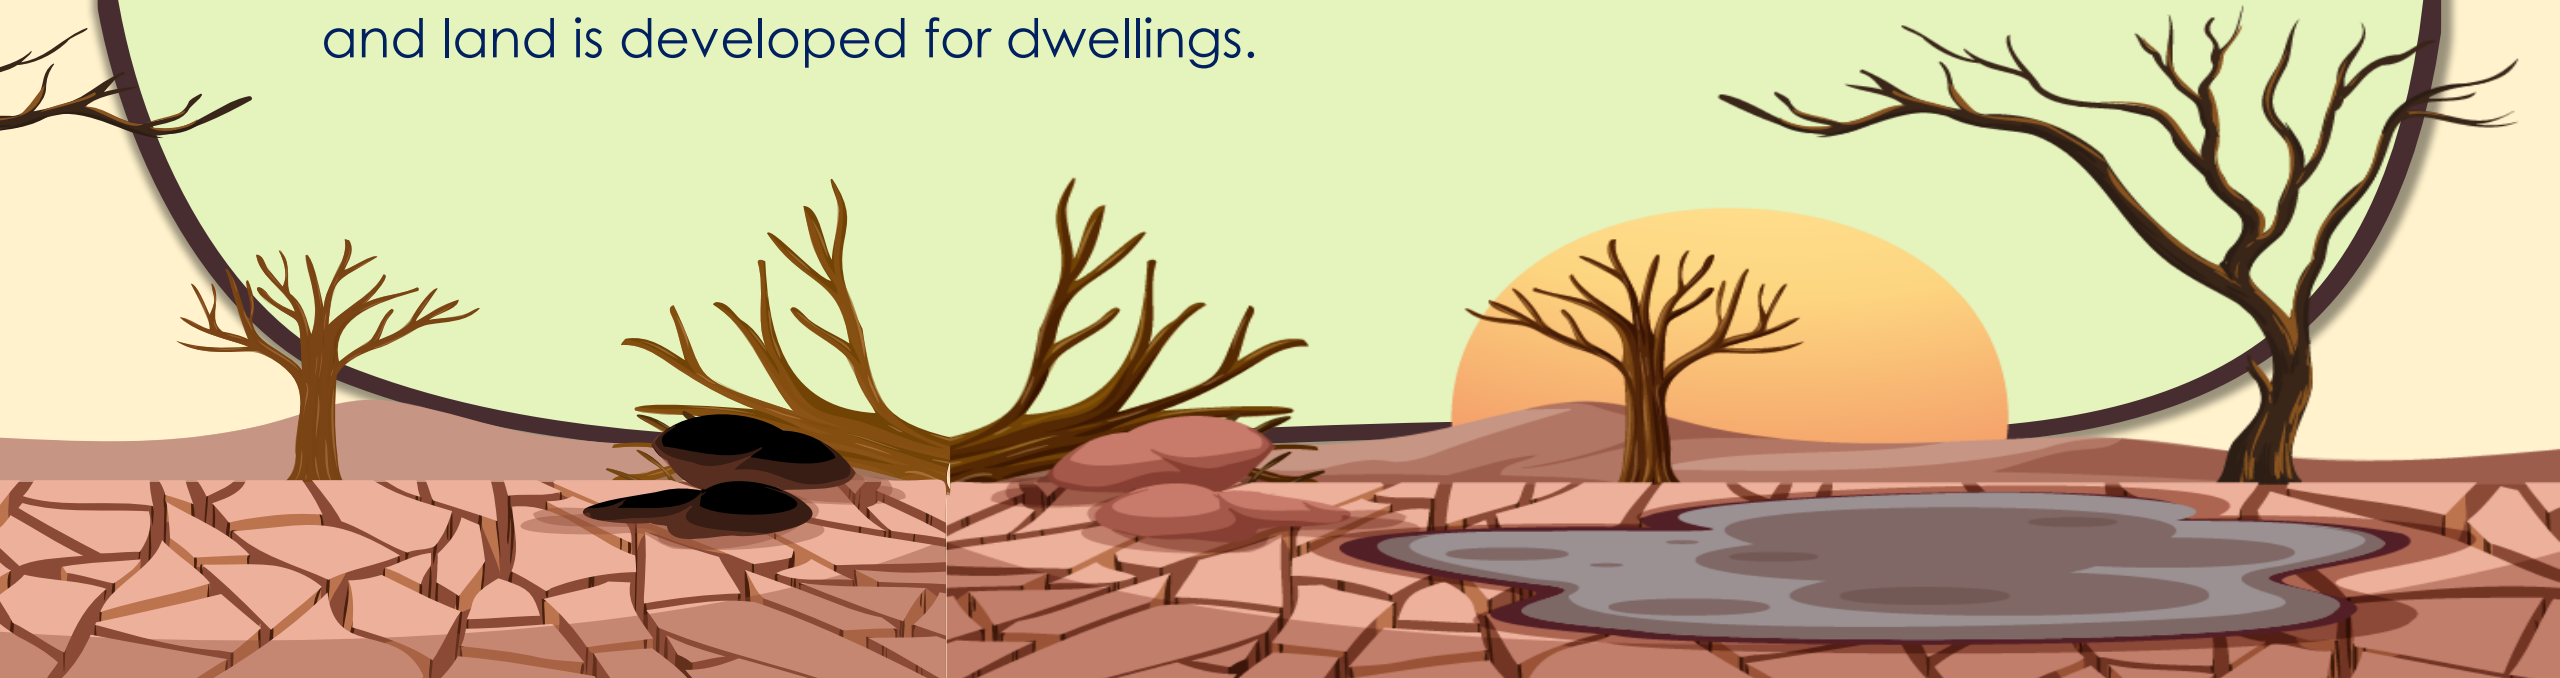

Deforestation impacts the amount of greenhouse gases in the **atmosphere**in two ways. First, when trees are fallen, they release the carbon they are storing into the atmosphere. Second, trees play a critical role in absorbing the greenhouse gases that fuel global warming. Fewer forests mean larger amounts of greenhouse gases entering the atmosphere, and increasing speed and severity of global warming.

In addition to helping regulate the earth's climate, forests provide habitats for over 80% of the plants and animals that live on land. But, deforestation destroys these habitats, diminishing biodiversity. Some estimate that four to six thousand **rainforest** species go **extinct**each year. This also affects the more than two billion people who rely on forest as sources of food and **shelter**.....

The biggest driver of deforestation is **agriculture**..... Farmers chop down trees in order to plant crops like soybeans, palm trees, and cocoa, or to make room to raise livestock for beef. Logging operations which provide the world's wood and paper products also cut countless trees each year. Forests are also destroyed as a result of growing urban sprawl, and land is developed for dwellings.
