## How to Escape a Sinking Car?

### 1. Stay calm and think clearly

A vehicle usually remains afloat for 30 seconds to two minutes. This short period gives you **plenty** of time to escape if you stay **calm** and act quickly. Keeping strong **mental** focus will help you make smart decisions.

### 3. Follow this order: "Seatbelts – Kids – Windows – Exit."

First, **unbuckle** your **seatbelt**. If it is stuck, cut it. Then assist children or any other **passenger** who needs help. Get ready to escape through a window—not the door.

### 5. Use the window as your escape route

Try lowering the window **immediately**. If it does not open, use a window-breaking tool to smash it. Car windows are designed to be very strong, so breaking them with your hands or feet is nearly impossible.

### 2. Do not try to open the door

Opening a car door in water is extremely difficult because of the strong water pressure. This **scenario** can make the car **sinking** faster, trapping every **passenger** inside.

### 4. Help children and other passengers

Make sure they **unbuckle** their **seatbelts**. If possible, guide them to exit through their own window. If not, lead them to the nearest window at the front.

### 6. Swim out and move toward a safe area

Once outside the window, push away from the vehicle and swim toward safety. Staying **calm** and knowing these steps can help you escape in less than a minute.
